

ESDIS Metric System Terms of Use

Note: Read the following terms and conditions carefully before using this system. By using or accessing this system, you acknowledge that you have read this "Terms of Use" agreement and that you accept the agreement.

System Access

The ESDIS Metrics System (EMS) is a U.S. Government computer system. This system is for use by authorized users only. By accessing and using the EMS, you are consenting to your use being monitored. User names and passwords are required to access the EMS and are strictly prohibited from being shared. Unauthorized use of, or access to, this computer system may subject you to disciplinary action and/or criminal prosecution.

EMS Environments

The EMS consists of Production (**PROD**) and User Acceptance Testing (**UAT**) environments. **Users may only publish, disseminate, email or analyze information from the PROD environment of the EMS.** Data within the **UAT** environment is subject to constant change and has not been validated by the EMS or Data Providers.

Data Consistency

The EMS makes every effort to provide accurate information to users. However, reports created using the EMS are dependent on the quality of data provided to the EMS. Data Providers may rectify issues with metrics by sending the EMS revision files, which may change counts of products, granules, files, volumes, and users reflected in previously run reports. The EMS maintains records of these revision files.

Data Publishing

When **publishing, printing, presenting, distributing, emailing or otherwise communicating information** obtained from the EMS, **users must adhere to the NASA Privacy Policy (NPD 1382.17 G).** This policy includes but is not limited to protecting the privacy of contributors by **not publishing their names, email addresses, IP addresses or other similar information** that falls under the NASA Privacy Policy guidelines. When publishing or presenting information from the EMS, you are agreeing to adhere to these guidelines.
